UTILITIES

April 1, 2019

Purchasing,

The Utilities Department is currently in need of purchasing and the installation of three (3) new clear well pumps for the Water Treatment Plant. The existing clear well pumps have exceeded their life expectancy due to wear and tear and are demonstrating the need for replacement. We are currently seeking to replace the existing clear well pumps with new, more efficient, and effective Xylem Goulds VIT-DITM 14RHMC. Hudson Pump & Equipment is the sole provider for the Southeast Region of Florida who supplies the aforementioned type of pump.

The clear well pumps are a critical part of the process and daily operations of the Water Treatment Plant. The clear well pumps are used to transfer treated filtered water from the clear wells into the City's two 3 million gallon storage tanks located at the Water Treatment Plant and one 2 million gallon storage booster station located on West Oakland Park Blvd that supplies treated and filtered water into the water distribution system.

Regards,
