# Mission Statement

At LHPP, our mission is straightforward: to make life better for everyone in the City of Lauderdale by addressing the Social Determinants of Health (SDoH).

# Vision

We envision a healthy, prosperous, and safe Lauderdale, where residents, visitors, and workers can enjoy a good quality of life, within and beyond the city.

# Smoking among adults

Lauderhill has an adult smoking rate nearly 40% higher than the County. The concentration of highest rate tracts are south and east of City Hall. Rates go as high as 29%.

# Asthma prevalence among adults

Lauderhill has an adult asthma rate nearly 30% higher than the County. Several tracts in southeast Lauderhill have higher rates than the rest of the city.

# Stroke among adults

Lauderhill has an adult stroke rate about 37% higher than the County.

All but three (4) of Lauderhill's census tracts are high to very high for this health outcome.

# Cancer among adults

Overall, Lauderhill has an adult cancer rate only 3.39% higher than the County.

However, there is a cluster of cancer just north of City Hall with rates as high as 10%, which is 72% higher than the County.

**Together we will make the City  
of Lauderhill the best place to  
live, learn, work, play, do  
business and raise a family.**

**Thank you!**
